SUMMARY

Computer Science undergraduate at BIT Bengaluru (CGPA: 8.5/10, no active backlogs, graduating June 2027). Builds and ships full-stack and AI-assisted software using Java, Python, JavaScript, and C++. Comfortable across the stack—from database schema design to React UIs to containerised deployments. Has shipped two substantive projects end-to-end and placed 2nd in a 36-hour hackathon.

EDUCATION

Bangalore Institute of Technology

B.Tech in Computer Science — CGPA: 8.5/10 — No Active Backlogs

Bengaluru, India

Sept 2023 – June 2027

TECHNICAL SKILLS

Languages: Java, Python, C++, JavaScript (ES6+), SQL

Web Development: React.js, Next.js, Node.js, FastAPI, HTML, CSS, TailwindCSS, REST APIs

Databases: PostgreSQL, MongoDB, Firebase, Redis

CS Fundamentals: Data Structures & Algorithms, OOP, DBMS, OS, Networking, Complexity Analysis

DevOps & Cloud: Docker, Git, CI/CD (GitHub Actions), Vercel, Render, Linux

AI/ML: TensorFlow Lite, DeepChem, scikit-learn, Federated Learning

PROJECTS

MolGenix – AI-Powered Drug Discovery Pipeline

GitHub

React · FastAPI · RDKit · DeepChem · AutoDock Vina · Gemini API · PostgreSQL · Docker

- Accepts plain-English disease descriptions and outputs ranked drug candidates with binding scores and 3D molecular visualisations—cutting early-stage screening from weeks of manual work to a single pipeline run.
- Wired in **DeepChem GNN models** to flag hepatotoxicity, cardiotoxicity, and blood-brain barrier penetration via a traffic-light scoring system; piped results through AutoDock Vina for docking and generated one-click PDF reports via ReportLab.

Eklavya – AthleteOS | Athlete Data & Intelligence Platform

GitHub

FastAPI · React Native · Next.js · PostgreSQL · Redis · Celery · scikit-learn · Docker · AWS S3

- Designed a **multi-interface sports platform** with separate FastAPI services, a Next.js dashboard for coaches and federation admins, and a React Native mobile app for athletes—all on a shared PostgreSQL database.
- Added a **scikit-learn injury risk model** with SHAP explanations so coaches can see which metrics (load, sleep, prior injuries) drive each prediction. Deployed with Celery task queues, Prometheus monitoring, AWS S3, and GitHub Actions CI/CD.

ACHIEVEMENTS & EXTRACURRICULARS

2nd Place – Augmentix Hackathon, NMIT Bangalore: Built MolGenix with a 3-person team in 36 hours—owned the FastAPI backend, DeepChem integration, and docking pipeline end to end.

Smart India Hackathon – Internal Qualifier: Shortlisted at BIT for a federated learning-based solution for [your problem statement]. Led architecture design and presented the technical approach to faculty judges.

Competitive Programming: Consistent on Codeforces and LeetCode; completed Abdul Bari's C++ DSA course (graphs, DP, trees, complexity).

ML A–Z Certification: Completed Udemy's ML A–Z—built regression, classification, clustering, and NLP pipelines in Python with scikit-learn.

Under 25 Community: Managed a team of 8 running campaigns across platforms; restructured the content calendar and posting cadence, contributing to a 35% engagement increase over one quarter.
